## SWEATERS, AN INDISPENSABLE FASHION, IN NEW CONQUESTS

Sweaters, that faithful, wonderful, almost indispensable fashion, are due for well-deserved recognition again when National Sweater Week is celebrated from Sept. 20 to 25.

It seems that no matter what changes take place in the fashion world, sweaters continue to hold their own. This fall, designers have really gone all-out to make their sweater collections outstanding. Perhaps the one most significant trend in sweaters is their colors. Heretofore, colors have long been kept the barest minimum with pastels predominating. This year things are going to be different in that colors are not only bright and vivid, but the combinations are exciting. Although sweater styling, too, is quite new, the predominate trend seems to be toward knitted vests. Vests, in all fabrics, are big fashion news this year and knitted ones are particularly smart.

European flavor inasmuch as these imports are the basis of styling inspiration. European principles of design, American production know-how, and design practicality, prove a peerless combination. Elasticized neckbands, to prevent stretching, and use of new construction at the armholes are features. Shown are coordinated sweater sets in matching or contrasting colors, many with geometric patterns carried out in both sweaters. Styles may come and go, but it seems that the classic pullover and cardigans go on and on. This season, with more and more shoppers becoming "pair-off" conscious, there's every indication that good sweater separates will maintain their unprecedented popularity.

## Announcing your date with 60-cycle current

The electric current supplied to our customers in this area will be changed to 60 cycles by distribution lines, and each customer will receive a notice by mail stating the date on which his current will be changed. The first distribution line (and all of the customers served by it) will be changed to 60 cycles on:

September 22, 1948

Edison contractors will call on each customer to determine whether any changes are necessary in his equipment for operation on the new frequency. Changes necessary in appliances will be made by California Electric and Maintenance Co., at Edison's expense, a few days before or after your current is changed. In the meantime, continue to use your appliances as usual.

The Edison Company is changing its frequency to give its nearly 700,000 customers the conveniences and economies which result from standardization and mass production. Standardization and mass production mean lower prices, lower repair and service charges for you. Standardization eliminates the cycle-change problem when you move from one area to another.

Your friendly cooperation in this tremendous task will help us serve you better.
